09.04 – 11.04. 2019  
Hall 4, Booth 360

## OUT OF THE BOX!

ULTRA-ROTOR Technology  
made mobile

A compact design combined with smart  
system engineering for a fast and  
flexible application at your site:

The CONTAINER-Solution  
made by JÄCKERING

For many years the ULTRA-ROTOR has been well known for solving problems related to simultaneous grinding and drying. No matter how complex the material whether it be moist, sticky, difficult to convey or to dry, our customized air turbulence mills make this process possible for a wide diversity of materials.

Every day we are faced with new challenges of providing representative samples of small quantities at the customers production sites - "fresh and unspilt" as possible and subject to specific quality and safety standards.

With ULTRA-ROTOR technology we have developed a new solution for these problems with the new compact, transportable 20"High Cube Container.

*This ensures the flexibility you need!*

*Please contact us whether for rental or purchase!*
